

Firefighter Administrative Safety Project

Administrative safety violations are at the root of most firefighter personnel actions and claims of workplace environment harassment/hostility. These violations compromise public trust, squander taxpayer dollars, crush agency moral, and derail efforts towards diversity, inclusion and recruitment.

The [Career Survival Group](#) has over a decade of experience in researching and addressing firefighter administrative safety violations. We have provided Career Survival training to over 100 Fire Service agencies in the US and Canada. We are now offering Career Survival 2.0 as yearlong project teaming our experts with your agency to clearly identify and respond to common administrative safety factors.

Career Survival 2.0 is offered to multiple agencies within a region in order to keep costs down. The project involves three segments, including three days of classroom training for selected Company Officers.

I am pleased to announce the Olathe Fire Department is participating in 2.0 and Chief Jeff DeGraffenreid has graciously offered to host the training segment on August 31, September 1 & 2, 2021.

With the classroom segment set for late August, we are hopeful to have the Olathe regional cohort set by early July since there is work to be done before the classroom training. Please take a moment to review the included brochures to assess the value to your agency.

Feel free to contact me directly with any questions. Our team is looking forward to partnering with you and your agency!

Be safe, E
